

Integrated Solutions for Government and Industry

An integrated team of geospatial, engineering and natural resource consultants, Sewall partners with clients to create practical, sustainable solutions. Our diverse portfolio is based on 100 years' experience in surveying and engineering; 60 years' in aerial mapping; and 20 years' in GIS and software application development. In the last 10 years, our offerings have expanded to include web hosting services, software as a service, and a secure geoportal for the collection, distribution, and resale of data.

We meet the needs of industry and government clients project by project through the integration of the following products and services:

Geospatial Solutions

- Strategic and business planning
- Needs assessments
- Systems design and integration
- Web hosting and user applications
- Sewall GeoPower™ Portal

Engineering Services

- Civil, environmental, marine, and traffic engineering
- Utilities infrastructure mapping and asset management
- Surveying services

Aerial Photography, Imaging & Photogrammetry

- Aerial photography
- Photogrammetric mapping
- Digital orthophotography

Forestry & Natural Resources

- Appraisal and inventory
- Forest management, management planning, modeling
- Natural resources mapping and information systems

Through one point of contact, you can leverage complete professional expertise to help you reach your project objectives.
